

ACTIVTRAK FOR EDUCATIONAL INSTITUTIONS

Help your students be the champions of communication, collaboration, and connection.

ActivTrak’s student monitoring system gives administrators of all educational institutions— public, private, charter, virtual and home-schooling—a real-time look at every single action that happens on students’ computers. ActivTrak works seamlessly alongside G-Suite for Education on Chromebooks and ChromeOS.

OFF-CAMPUS ACCOUNTABILITY

Keep a watchful eye on students’ research and time management skills. Set the standard now and make an impact on children’s futures. Hold students accountable, teach them how to stay on task, and how to use a computer appropriately.

SAFETY

Create Alerts or keywords in title bars for trigger words. Prevent and intervene in violence, bullying, and other harmful behavior. Restrict distracting, malicious and inappropriate content with website and application blocking.

SCHOOLWORK

See where students struggle and accept no excuses. You will see when students opened assignments and how long they worked on homework. Watch in real-time how students process problems and reach conclusions.

SECURITY

The data collected in your ActivTrak account is sensitive. We do everything to protect it. We make sure your account is completely secure by implementing these high-level security features: password protection, HTTPS encryption, remote storage database, backup database, and nightly database updates.

FUNDING

It will go on the permanent record. Simplify reporting to the state. Keep your grants and justify funding.

The data that ActivTrak collects can be shared with teachers, administrators, parents, and students to develop individual and school-wide goals. Create initiatives on how to improve test scores and overall performance.

Manage your classroom like a pro, keep students on track, and evaluate your own teaching performance by monitoring your students’ computers. Integrating ActivTrak is simple and easy to download and install from G-Suite.
